Shruti Gajre

+1 (510) 362-9377 | shrutigajre.official@gmail.com | linkedin.com/in/shrutigajre | github.com/shrutigajre150 | Bay Area, CA

Professional Summary

Data-focused engineer (M.S. Statistics, Data Science) building production software: backend APIs, data pipelines, and LLM workflows in Python, SQL, PostgreSQL, and AWS. Automated data validation across 100+ test cases at UL Solutions and supported AWS ingestion pipelines at UnitedHealthcare. Shipped PaperDeck, a RAG system with evaluations and guardrails (1.000 MRR, 100% valid citations). Hands-on with robotics data at Meta.

Technical Skills

GenAI and NLP: Large Language Models (LLMs), Retrieval-Augmented Generation (RAG), prompt engineering, prompt and context management, AI agents, LangChain, LangGraph, OpenAI APIs, Hugging Face, text classification, summarization, information extraction

Programming and ML: Python, R, SQL, scikit-learn, pandas, NumPy, NLP, machine learning, predictive modeling, model evaluation (cross-validation, ROC-AUC, confusion matrices), time-series forecasting, Apache Spark

Retrieval and Data: Embeddings, vector search, semantic search, FAISS, PostgreSQL, SQL Server

Data and Analytics: ETL and data pipelines, data validation, anomaly detection, data quality, KPI tracking, healthcare and payor analytics

AI Development: FastAPI, Streamlit, REST APIs, API integration, document processing, AI automation, intelligent automation

Cloud and Tools: AWS (Kinesis, S3, Redshift), Azure, Git, GitHub, Power BI, Tableau

Professional Experience

Meta Platforms Inc. (contract through Tundra Technical Solutions USA Inc.) Menlo Park, CA

Research Collaborator V (AI Data Operator) *Oct 2026*

- Validated about 600 multimodal sessions per day against data collection protocols, re-collecting failures and maintaining accurate metadata so training datasets stayed complete, correct, and compliant with data security requirements.
- Partnered with researchers and robotics engineers to diagnose data anomalies by session and task ID, driving protocol refinements that improved data quality.

UL Solutions (Client: Apple) Fremont, CA

AI Intern *May 2026 – Aug 2026*

- Automated data validation and anomaly detection across 100+ test cases in Python, catching data-correctness issues early and reducing downstream testing delays by about 15%.
- Built Streamlit applications and FastAPI services for interactive data analysis, used by compliance and testing teams to review results.
- Cut manual processing effort by 20% by building repeatable Python and pandas workflows, speeding up report turnaround for testing teams.
- Developed LLM document workflows (RAG with LangChain and FAISS, OpenAI and Hugging Face models) for classification, summarization, and extraction over regulatory documents, evaluating answer relevance on test queries.

ValueMomentum (Client: UnitedHealthcare) Hyderabad, India

Data Analyst *Jul 2022 – May 2024*

- Partnered with business and engineering stakeholders to define member incentive program KPIs, translating business questions into SQL-based analyses and automated recurring performance reports that reduced manual data preparation.

- Analyzed copay-offer, prescription savings, and health-action data from 20+ vendors and point-of-sale systems using SQL and Python, identifying data-quality issues affecting program KPIs and incentive reporting.
- Used Apache Spark to analyze member behavior, examining patterns in prescription savings usage and incentive participation to support program performance evaluation.
- Developed validation logic to reconcile earned member incentives against funded budgets, reducing manual reconciliation effort by approximately 60% and improving financial reporting accuracy.
- Wrote SQL queries in AWS Redshift to transform data ingested through Kinesis and S3 into curated datasets for downstream analysis and reporting.

Projects

Multi-Series Retail Sales Forecasting

Python, scikit-learn, pandas, Random Forest, Gradient Boosting, R (tidymodels, modeltime)

Code: github.com/shrutigajre150/Projects

- Forecast 52 weeks of weekly sales across 7 store-department series, engineering leakage-free calendar, holiday, and lag-52 features for global Random Forest, Gradient Boosting, and Ridge models.
- Validated against seasonal-naive baselines (52-week holdout, rolling backtest): Random Forest reached 7.6% WAPE, 3% better than baseline, while a growth-adjusted baseline won at 13 weeks (6.7% WAPE).

PaperDeck: Research Paper Assistant with Cited Answers and Slide Generation

Python, FAISS, BM25, Sentence-Transformers, OpenAI API, python-pptx, Streamlit

Live: paperdeck-shruti.streamlit.app | Code: github.com/shrutigajre150/paperdeck

- **Retrieval:** Built hybrid search (BM25 + MiniLM embeddings in FAISS, Reciprocal Rank Fusion) over 618 page-tagged passages from 8 arXiv papers, reaching 1.000 MRR and 100% Hit@1 on 16 hand-labeled questions (up from 0.969 with embeddings alone) at about 16 ms per query.
- **Answers:** Restricted the LLM to retrieved passages with mandatory [paper, page] citations, a relevance cutoff, and automatic removal of unretrieved citations; 75% of answers fully supported (0.84 faithfulness), 100% valid citations (35/35), and all out-of-scope questions declined.
- **Slides and deployment:** Built an LLM slide agent that returns structured JSON rendered by python-pptx into a cited deck and summary per question; deployed on Streamlit Community Cloud with a bring-your-own-key design so no user keys are stored.

Education

California State University, East Bay — Hayward, CA
Master of Science (M.S.) in Statistics (Data Science) — *Aug 2024 – May 2026*

Vardhaman College of Engineering — Hyderabad, India
Bachelor of Technology (B.Tech) in Electronics and Communication Engineering — *Aug 2020 – May 2024*

Publications

Multi-Algorithmic Genetic Disease Detection Using Pupillometry, Springer, Cham — Sep 2024
Li-Fi Enhanced Object Tracking: A Cutting-Edge Approach, IEEE — Jan 2024
